

# Singularity Package

The automation industry is evolving rapidly, from remotely controlled systems to completely autonomous robots executing complex tasks.

With the increased complexity of autonomous technologies in different applications, new forms of risks have been quietly making their way into the industry. Whether companies sell a product, operate robots as a service, assemble parts, or build software, key risks must be covered.

### Product Risk

Tech products are consistently exposed to third-party liability

### Operational Risk

Hardware & software failures, engineering mistakes are among the common risks

### Cyber Risk

Cyber liability gaps can expose the company to a chain of adversities

**It is critical to be ahead of the game and manage risks with a fit-for-purpose coverage**

**Singularity Package** is the new insurance program designed to accomplish this

### Robotics E&O

Protect your company from deployment-specific claims, software & hardware issues

### Cyber Liability

Protect your company from rogue hacks affecting your robotics operations & internal systems

### General Liability

Protect from accidents and injuries on premises & product defects when in customers' hands
